Commissioner for Patents

The Reply Brief filed May 15, 2008 is accepted and entered into the record.

On page 2 of the Reply Brief, appellant states that a previous rejection under 35 USC 112, first paragraph was made and then withdrawn after amendment. Appellant is correct, once the amendment was made that particular rejection was withdrawn. This has no bearing on the current rejection at hand, the rejections are different.

At the top of page 4, appellant cites only semantics are an issue and questions that this issue was not brought up earlier in prosecution of the application. The amendment was not presented earlier in prosecution for the issue to be brought up. The application was appealed directly after the amendment, so the Examiner's Answer was the first chance at addressing the new limitation.

On page 5, appellant alleges the claim language "drying the MEA under a heat lamp as the catalyst ink is being sprayed during several passes" is equal to "spraying the membrane and at the same time drying the membrane". The claim language is not limited to appellant's interpretation of concurrently spraying and drying. Passing the MEA through an oven after spraying and repeating the process meets this limitation.
